Notes

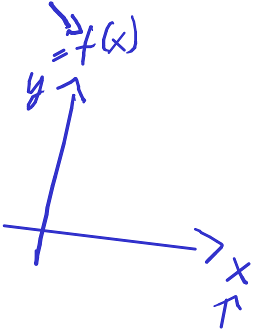
$f(x) = 2x^2 + x - 5$

$f'(x) = 2 \cdot 2x + 1$

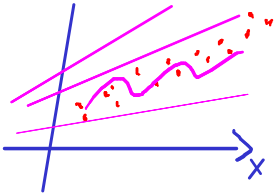
y output

$\{(2, 5), (-1, 4) \dots$

input x



Notes



$$f(x) = w_1 \cdot x + w_0$$

$$\begin{bmatrix} 1 \\ x \end{bmatrix}$$

$$f'(x) = \frac{df}{dx}$$

$$\frac{df}{dw_0} = 1 \qquad \frac{df}{dw_1} = x$$
